SUMMARY

Extremely motivated, adaptable, and able to learn independently. Possesses a positive attitude, a professional demeanor, and excellent interpersonal skills. Eager to grow knowledge in marketing, international business, and technology through teamwork and continuous education.

EDUCATION

College Of Engineering Roorkee Roorkee, Uttarakhand
Veer Madho Singh Bhandari Uttarakhand Technical University (VMSBUTU) Aug 2022 - Sept 2026
Bachelor of Technology in Computer Science and Engineering

EXPERIENCE

Python Developer Aug 2024 – Dec 2024
Oasis Infobyte

- Developed robust server-client communication for real-time chat applications.
- Implemented advanced techniques for understanding and responding to user queries in voice assistants.
- Machine Learning Integration: Utilized ML models for enhancing chatbot responses and voice recognition accuracy.

PROJECTS

I. Credit Risk Analytics Dashboard | Python, Streamlit, XGBoost, SQLite

- Built ML-powered dashboard analyzing 300K+ loan records for default prediction.
- Developed Logistic Regression & XGBoost models (AUC: 0.75) for risk scoring.
- Implemented risk segmentation (K-Means) and SHAP-based model explainability
- Designed multi-page Streamlit app with SQL querying and interactive visualizations

II. CardioClassifier | Python, TensorFlow, Numpy, Pandas, Matplotlib.

- This project focuses on predicting and classifying arrhythmias using various machine learning algorithms.
- Applied Principal Component Analysis (PCA) to reduce the feature space and eliminate collinearity.
- Used Python, TensorFlow, and Scikit-learn for predictive modeling.
- Optimized performance using precision, recall, and F1-score metrics.

III. Voice Assistant using Python and Flask | Python, Flask, SpeechRecognition, pyttsx3, HTML/CSS, APIs

- Engineered a browser-based voice assistant using Flask and Python for real-time speech processing and response delivery.
- Integrated voice capture (MediaRecorder API) with speech_recognition, pyttsx3, and third-party APIs (YouTube, Wikipedia, OpenWeatherMap).
- Designed a responsive UI with Bootstrap and implemented command-based actions like playing media, fetching weather, and answering factual queries.

TECHNICAL SKILLS

Languages: C/C++, Python, SQL (Postgres), JavaScript, HTML/CSS and Java.
Frameworks: TensorFlow, Keras, Pytorch, Node.js, React.js, Flask.
Developer Tools: Git, VS Code, PyCharm.
Libraries: Pandas, NumPy, Matplotlib
